

MCS-1000: Money Counting Scale

The MCS-1000 is an easy-to-use, highly accurate money counting scale that is an invaluable tool for supermarkets, restaurants and other retail environments. It is designed to quickly and accurately count both US coins and US banknotes. Other currencies can be uploaded through the built-in USB interface. With the MCS-1000 it takes only minutes to count your cash drawer. The intuitive user interface takes you through all coin and banknote denominations automatically, from the smallest coin to the largest banknote. The screen will display the quantity and amount for each denomination as well as the total amount for all denominations. The results are stored into memory and can be viewed both during and after the counting session. Totals are displayed on a large back-lit LCD screen and can be printed instantly on an optional printer. The MCS-1000 works on 9v battery or power adaptor, making it completely portable.
