How Dirty Do Bill Counters Get?

We all know that money is dirty, but really, how much can it affect the bill counters we sell? Below are some pictures of a bill counter we serviced. The After pictures are from after we blew out all the dust, but before we wiped everything down. This is one of the more extreme cases, but we do see similar machines several times a year.

This machine was about 2 ½ years old at the time of service. As you can see, it had accumulated a lot of dust! Also, there's a link to our YouTube page for a video from when we took the machine outside and blew out all the dust with some compressed air.

https://youtube.com/shorts/MoQMtTNhGdY

It's always a good idea to use some compressed air or canned air to blow out loose dirt and dust at least once a week, and clean all the sensors in the machine with alcohol wipes. Don't forget to send it to us every couple of years so this doesn't happen to you!

Thank you,
KLOPP International
