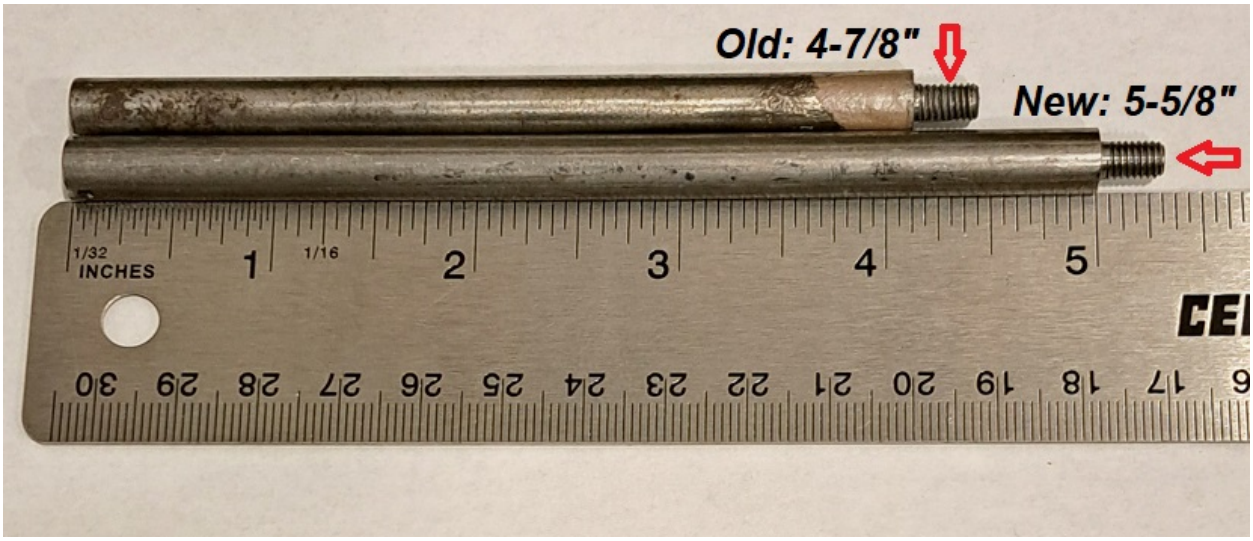
Determining Frame Stand Type for KLOPP Model CM or CMB Coin Counters

Your KLOPP Model CM, or CMB, may have either of two Frame Stands of different lengths. It is important for you to determine which Frame Stand you have before you call to place your order. Older models may have shorter Frame Stands, while newer models will have longer ones. The picture below shows the comparative lengths.

IMPORTANT: If you have the old, shorter Frame Stands, we highly recommend you send your machine to us to update to the new Frame Stands. The update requires drilling out the existing holes on the Counter Base to a specific depth, using an end mill or a drill press.

YOU CANNOT DO THE PROCEDURE WITH A HANDHELD DRILL.

There is a document at the bottom of the Maintenance Information page on our website, that has the instructions for the procedure, if you have the right equipment to perform it properly.



Please call if you have any questions.

Thank you,
KLOPP International, Inc.
