How to read a KLOPP Serial Number

Over the years there have been a few different numbering systems for KLOPP Serial Numbers. We have attempted to provide a guide for reading the most common variations.

Please note that there can be some overlap between different eras, and there do exist some serial numbers whose format idea is lost to time.

Thank you,
KLOPP International, Inc.

Current Serial Numbers

Format: 8-digit number
Example: 20526123
-The first number, 2, is for "2000", in other words, the machine was made since the year 2000.
-The next four numbers, 0526, are the month and year. In this case, 05 for May and 26 for 2026.
-The last three numbers are the order in which the machine was made that year. In this case, it was the 123rd machine made in 2026.

1990's Serial Numbers

Format: 6- or 7-digit number
Example: 0791236
-The first four numbers, 0791, are the month and year. In this case, 07 for July and 91 for 1991.
-The last three numbers are the order in which the machine was made that year. In this case, it was the 236th machine made in 1991.

1980's Serial Numbers

Format: 2 letters followed by 3 or 4 numbers
Example: LC1435
-The two letters stand for the month and year according to the chart below.
-The numbers are the order in which the machine was made that year. In this case, it was the 1435th machine made in October, 1982.
-This system was used between 1980 and 1991

Month	Year
A Dec	A 1980
B Jan	B 1981
C Feb	C 1982
D Mar	D 1983
E Apr	E 1984
F May	F 1985
G Jun	G 1986
H Jul	H 1987
J Aug	J 1988
K Sep	K 1989
L Oct	L 1990
M Nov	M 1991

Older Serial Numbers

Generally speaking, serial numbers from the 70,s, 60's, and late 50's are 6- or 7-digit numbers, similar to the 1990's.
Example 1: 257187
-The first number is the month, in this case 2 for February.
-The next two numbers are the year, in this case 57 for 1957.
- The last three numbers are the order in which the machine was made that year. In this case, it was the 187th machine made in 1957.

Example 2: 5751012
-The first number is the month, in this case 5 for May.
-The next two numbers are the year, in this case 75 for 1975.
- The last four numbers are the order in which the machine was made that year. In this case, it was the 1012th machine made in 1975.

Serial Numbers from Earlier Years

We don't have a lot of records from the 30's and 40's, so it's difficult to state with any certainty. We have had a few machines come through that seem to indicate that machines from the 1940's listed the year first, and then the machine number. For example, 48050 would be from 1948, and be the 50th machine made that year. We have seen some early 1950's machines that follow this numbering system as well, for example 55470 (1955, 470th machine).
